Douglas Invex® 3S Case/Tray Packer provides low volume production packagers with high returns

Alexandria, Minnesota – May 29, 2009

The Douglas Invex® 3S Case/Tray Packer provides low volume production packagers with high returns by incorporating all the flexibility of servo controls in an economical, 17 case/tray per minute, small footprint format.

Incorporating servo controls helps machine functions operate simultaneously instead of one at a time, increasing efficiencies. Servo motors are readily programmed and more adaptable to changes and adjustments. This helps with fast, repeatable changeovers, when running a wide range of products, or when products or materials vary slightly. Smooth, quiet operation reduces component wear for lower maintenance costs.

Invex® 3S features include simplified diagnostics so the operator or technician is able to pinpoint the root cause of problems from the human machine interface. Changeovers are recipe-driven, with minimal change parts and simple hand wheel adjustments. Control components are located at the perimeter of the machine for easy maintenance. OMAC Packaging Guidelines standards-based connectivity and an IEC conforming software structure makes the Invex® 3S PackML- and PackTags-ready.

All Douglas Machine solutions are backed by a 3-year limited warranty.
